

Missing Software

Check to see if all expected applications are installed. If any are missing, launch Software Center on your new computer to self-install applications published there. Applications that you installed yourself or via the Service Desk will need to be manually installed again or requested through PULSE Self-Service.

Software Center	Request Software through PULSE
<div>1. Use your Windows Search Bar and type Software Center.</div> <div></div>	<div>1. Go to the CPG SSO Portal and select the PULSE Self-Service icon.</div> <div></div>
<div>2. Search the Applications menu for your missing software.</div> <div></div>	<div>2. In PULSE, select Services from the left navigation menu.</div> <div></div>
<div>3. Click on the missing application and click the blue Install button.</div> <div></div>	<div>3. Select Computer Services and Support.</div> <div></div>
<div>4. Once the software installs, it will be available on your new computer.</div>	<div>4. Select Software Request or Software Requiring Additional Approval Request. Consult each list to see what software is available.</div> <div></div>
<div>5. You may need to restart your computer for all changes to take effect.</div>	<div>5. Complete the request form and select your missing software from the list. You can select multiple software in the same request by using CTRL + Click.</div> <div></div>
	<div>6. You will receive a confirmation once you submit your request. Please allow 2 business days for request fulfillment.</div>
